BOSCH

Object: Internship application

Dear Madam Lagarde,

Currently studying electrical engineering at INSA Strasbourg (France), I am looking for an internship for this summer from 8<sup>th</sup> June to 22<sup>nd</sup> of August 2020.

Producing high quality motorized devices for more than thirty years. Their reliability, ergonomics and efficiency are not to be proven anymore.

Both my studies and my free time allowed me to acquire and train a wide variety of skills. I most of the time work on embedded systems, electronics development, or programming. I also have designed numerous Printed Circuit Boards in different domains such as power applications, high speed ones or either completely analogue boards. I learned programming languages, including VHDL for FPGA, but also MyRio, Arduino, PIC and even Raspberry pi. I usually develop in low and middle level of programming but I am also used to high level applications with C++ objected-oriented programming too.

I have always been interested in electronics, and am thus willing to increase both my knowledge and my skills along with your team. Serious, motivated, and already used to research and development, I bind myself to fulfil any task you would accept to give me.

Hoping to hear from you very soon,

Yours sincerely,

Jean SOUDIER
